

# Eliminate Broadcasting the Remote Record Over Paging

Viking digital announcers are often used to play a recorded message over a paging system. A customer recently had a DVA-500A playing it's message over paging but when calling in to re-record the message, the remote record process was heard over the paging as well. When the DVA-500A is wired in the normal fashion, the remote record process will be heard over the paging system. When the DVA-500A is configured and wired as shown below, none of the remote record process is heard.
