

# Low Cost Multi-Line Call Screener System

Using a low cost Panasonic 3 C.O. line, 8 station KX-TA824 Hybrid Phone System  
- Expandable to 8 C.O. lines and 24 stations

Basic Call Screener System: All incoming calls are answered by the DVA-500A (DOD# 115), given up to 1 minute of frequently requested information (location, hours, show times, etc.), leaving employees free to perform their normal jobs without interruption. Callers who need more information simply stay on the line after the message is complete. Phone in the hunt group will begin ringing unless the caller receives the information he needs and hangs up.

If the KX-TA824 Caller ID feature is enabled, the caller's info will appear on the ringing station phone.

The system can be expanded to 8 C.O. lines and up to 24 stations by adding cards to the KX-TA824. Add additional DVA-500As or ACA-1As to answer more calls at a time for installations with heavier traffic.

Enhanced Call Screener System: Operates like the basic system, but allows the caller to bypass the message or route themselves to departments or specific extensions. This system uses the ACA-1A (DOD# 005) instead of the DVA-500A.
