WHAT’S INSIDE?

• Find out WHAT’S NEW so far this year at Viking
• Low-profile emergency phones
• Summer trivia
• 70V Paging

NEW: Compact Emergency Phones

These ADA Compliant Compact Emergency Phones are designed to provide quick and reliable hands-free communication for any standard analog telephone line or analog phone system station port. All 1600A Series phones meet ADA requirements for elevator or emergency telephones, and can be programmed from any touch tone phone. The phones can dial up to 5 programmable emergency numbers, as well as 2 central station numbers.

The phones can be programmed to automatically deliver a digital announcement to identify the location of the emergency call. Alternatively, a DTMF touch tone code may also be delivered. The "Call Connected" LED is built into the button and can be initiated manually or automatically. All programming parameters, including phone numbers and location numbers, are stored in non-volatile memory. The units are phone line powered, requiring no batteries or external power and are compatible with common Central Station Monitoring equipment.

For outdoor installations where the unit is exposed to precipitation or condensation, these phones are available with Enhanced Weather Protection (EWP). EWP products are designed to meet IP66 standards and may feature foam rubber gaskets, sealed connections, gel-filled butt connectors, as well as potted circuit boards with internally sealed, field-adjustable trim pots and DIP switches for easy onsite programming.

For more info on EWP, see DOD 859.

NEW: IP Hot-Line Courtesy Phones

Model K-19000-IP
Model K-1900W-IP

• Programmable auto-dialer
• Cycles through rollover numbers on busy or no-answer
• SIP compliant
• PoE powered (class 1, <4 Watts)
• Adjustable ringer volume
• Remotely programmable

For more info, call: 715-386-8861

THE VIKING ADVANTAGE

ENGINEERED AND MADE IN THE USA

2 YEAR WARRANTY

We know you choose Viking because we get the job done. Need another reason? Two year limited warranty. VIKING HAS YOUR BACK.

FREE AMERICAN PRODUCT SUPPORT

When you need product support, we won’t outsource your call. You’ll talk with one of our techs right here in HUDSON, WISCONSIN.

Coming Soon:
VoIP Compact Emergency Phones

Everything you love about Viking’s IP Emergency Phones: it’s smaller, low-profile chassis.

For more information on Viking’s Compact Emergency Phones, see DOD 215.

June Trivia: What famous Walt Disney character’s first words were “Hot dog”?
Answer: Mickey Mouse

Congratulations to AMY O-DAIR-SPEAKS from VISUALIZE YOUR TECHNOLOGY!

Which document does the Fourth of July commemorate?
Everyone who calls, emails, or faxes in the correct answer by July 31, 2020 will be entered into a drawing for a prize.

NEW: Emergency Phone Panic Buttons
The PB-3 and PB-3-IP are Emergency Phone Panic Buttons designed to mount discretely under a desk or countertop and provide a quick and reliable way to make a silent emergency call. The called party can silently monitor the situation or engage in two-way hands-free communication by entering a touch-tone “#”.
The Panic Buttons will each dial up to 5 emergency numbers and are easy to program. All programming parameters, including phone numbers and location numbers, are stored in non-volatile memory.
The PB-3 and PB-3-IP can be programmed to automatically deliver a digital announcement identifying the location of the emergency call, and an optional DTMF touch-tone code may also be delivered. The red LED integrated into the push button will light, indicating that an emergency call is in progress.

Why use 70V Paging Systems?
There are many advantages of using a 70V distributed audio paging system, such as being able to put more speakers on a wire run, having longer speaker wire runs, using smaller gauge wire, and being able to set the volume of each speaker independently.

NEW: 250 Watt Telecom Paging Amplifier
The PA-250 is a 250 Watt 70V Telecom Paging Amplifier that can drive up to two hundred fifty (250) 70V speakers and/or paging horns (each speaker set to “1 Watt tap”). The small 1U rack size chassis is possible because the PA-250 uses new amplifier technology that is 3 times more efficient than old designs. The high efficiency of the PA-250 means much less heat dissipation, smaller size, higher reliability, and lower cost. See DOD 500 for more information.

NEW: 250 Watt SIP/Multicast Paging Amplifier
The Viking model PA-250-IP SIP/Multicast Paging Amplifier provides up to 250 watts of loud paging for SIP based VoIP phone systems (hardware or hosted/cloud based service provider). The PA-250-IP can be used for standard SIP endpoint paging or multicast paging. The unit connects with a single CAT5/6 cable from your network switch. See DOD 501 for more information.

NEW: 250 Watt 70V Paging Power Amplifier
The PP-250 is a 250 Watt 70V Paging Power Amplifier that can drive up to two hundred fifty (250) 70V speakers and/or paging horns (each speaker set to “1 Watt tap”). The small 1U rack size chassis is possible because the PP-250 uses new amplifier technology that is 3 times more efficient than old designs. The high efficiency of the PP-250 means less heat dissipation, higher reliability, and lower cost. See DOD 511 for more information.

NEW: Line Verification Relay
Provide a Relay Contact when an Analog Phone Line is Down
The LVR-1 Line Verification Relay is useful on analog phone lines and extensions that do not have a method of monitoring the status of the idle phone lines. Phone lines can go out of service at any time and without any warning. You could be paying monthly fees for phone lines that are not in service and not realize it.
The LVR-1 Line Verification Relay monitors the voltage on an analog phone line. When that voltage goes below 2 Volts for a programmable time, an on-board relay is activated. When the voltage of the phone line goes above 2 Volts for the same programmable time, the relay is deactivated.
For more information, see DOD 504.

NEW: 250 Watt 70V Speakers and Paging Horns
Model 25AE-70V DOD 471
Model 30AE-70V DOD 473
Model 300AE DOD 497

Alyssa’s Law is legislation to improve the response time of law enforcement during emergencies in public schools. It mandates that all public elementary and secondary school buildings be equipped with silent panic alarms that directly notify law enforcement.
