

## Three AES-2000's Share One CO Line

AES-2000 and AES-2005 entry phones normally require a dedicated CO line but with the LC-3 equipped with special software, up to three can share one line. Any AES can call out to a tenant when the line is available. When a visitor activates an AES phone while the line is busy, their AES tries to call, provides a busy signal and displays "the line is busy" then hangs up. The visitor must attempt another call to the tenant. Remote programming of any AES phone is possible. Order and field install "LC-3 V1.1" software into the LC-3 for this application. LC-3 V1.1 can be purchased through a Viking authorized distributor or from the Viking Technical Support department.

**Viking LC-3  
with "LC-3 V1.1"  
software installed**

(see DOD 223 for  
more information  
on the LC-3)
